(a) **(b)** **(c)**

State A — intact

State B — perturbed context

$\Delta_h = E_B(h) - E_A(h)$

Detection: did importance change?

FALI: which changes account for Δ_h?

$\varphi_T + \varphi_R + \varphi_O + \varphi_V + \varphi_C = \Delta_h$

Attributions are defined under an explicit counterfactual intervention game.
